

---

When discussing the domain, and I use a term,  
and you use exactly the same term, we mean  
precisely the same thing.

# IT IS USED EVERYWHERE

## Diagrams

These applications will be based on representative industry verticals. Using a data-driven learning process that streams data as well as customer teams, creating an active learning environment that enables customers to extend and customize the application stacks and architectures that they are using. Including relationships with applicable reference architectures. This would enable single-site and multi-site/region application delivery/Passive data architectures. This would include orchestration, intelligent routing/load balancing, and support for continuous delivery via autonomous continuous delivery pipeline with each reference

        Pizza pizza = pizzaRepository.findByRef(ref);
        pizza.finishPrep();
    }
}
```

## Code

lost-pet-event, mvp	As a pet owner I should be able to create a lost pet event
mvp, rewards, user-profile	As a user I should be able to attach a bank account to my profile
mvp, rewards	As a user I should be able to attach a reward to a lost pet event
lost-pet-discovery, mvp	As a user I should be able to discover lost pets near my location
lost-pet-discovery, mvp, rewards	As a user I should be able to view the pet profile for a lost pet event
lost-pet-discovery, mvp	As a user I should be able to submit a potential match for a lost pet event
lost-pet-discovery, lost-pet-event, mvp	As a pet owner I should receive notifications of a potential match for my lost pet event
lost-pet-discovery, lost-pet-event, mvp	As a pet owner I should be able to list all submitted potential matches for my lost pet event
lost-pet-discovery, lost-pet-event, mvp	As a pet owner I should be able to confirm or reject a potential match for my lost pet event
